TEAM INFORMATION

Team Name/Project Title: Buffalos/PROfile Connected

Department: Computer Science & Engineering (CSE)

Faculty Advisor: Debra Parcheta

Team Members: Sumner Bradley, Daniel Cahoon, Dai Huynh

PROJECT INFORMATION

Description:

PROfile Connected is a new cloud-based service designed for the future of job hunting. This is a new evolution for business and job hunting, through the use of a new algorithm.

Abstract:

PROfile Connected is focusing on the job candidate’s experiences, successes, qualities, and ambitions to meet an employer’s needs. PROfile Connected is designed to be highly scalable and run on desktop and mobile platforms through a browser.

Users will fill out a questionnaire that covers topics over seven different categories. The user will be able to select whether the questions under each topic is something that they have knowledge about, are skillful at, or have an interest in. Once the user has finished this questionnaire all of their knowledge, skills, and interests will be displayed to them as well as prospective employers. The user’s results shall be compared to applications that are based on desired knowledge, skills, and interest of the position. Recruiters and applicants shall be able to display their matches and initiate a connection.

PROfile Connected will store relevant standardized forms that will aid in the hiring process by putting all of relevant information in one place to streamline the hiring process.
